POST /notify
request body
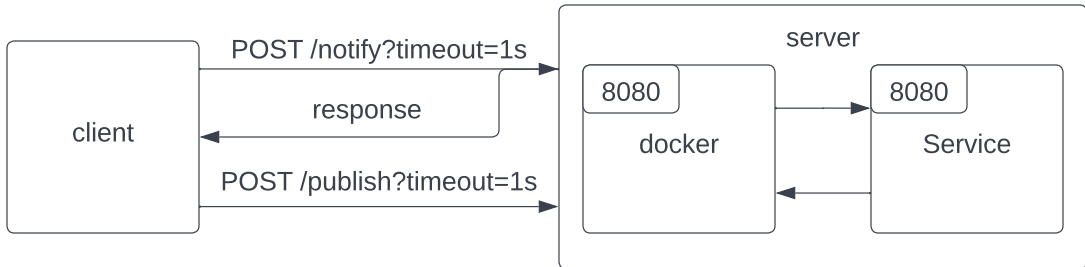

```
{
    "msgHashes": []string
}
```

PUT /publish
request body

```
{
    "msgs": [
        {
            "msg": string,
            "timestamp": string
        }
    ]
}
```

POST /notify
response

```
{
    "msgHashes": []string
}
```

Note: it is not necessary to use docker with such a small system, but I want to show that I know how to use it
